

PMOMax Marketplace Status Summary

Generated: Wed May 6 22:23:06 EDT 2026

Project reviewed: `katalyststreet-public`

Summary

PMOMax is configured as a Marketplace-oriented deployment with Cloud Run runtime settings and Marketplace/Service Control environment configuration.

Key Evidence

See raw file:

`raw/marketplace\_status\_redacted.txt`

Important Points

- Marketplace-related services are enabled.
- Cloud Run contains Marketplace-related configuration.
- Artifact Registry contains production container images.
- Any cleanup should avoid breaking Marketplace metering/reporting or production runtime behavior.

Recommended Position

Before deleting GKE or disabling services, confirm whether UBB/metering is fully decoupled from GKE and whether Cloud Run alone can maintain production Marketplace requirements.
